Programmable Precision High Power DC Power Supply

- High Power Density: 30kW in 3U
- Water-Cooled
- Front Loading Modules for Flexible Configuration
 Configure modules for 40V, 60V or other (as available) easily with rear panel dip switches
- Advanced Digital Features

 Factory "Flight data" recorder-like function
 Advanced fault detection

The **ASD FLX** with its 3U, 30kW water-cooled packaging provides one of the highest power densities available. The ASD FLX is designed for industry leading load transient response with outstanding output ripple and noise. The watercooled packaging allows for use in environments that normally exclude air-cooled power supplies.

The ASD FLX gets its name from its modular design with front loading modules for easy access and flexible voltage assignment. ASD FLX chassis houses three 10kW modules which allows user flexibility to scale power requirements by adding additional modules. This configuration provides redundant (n+1) capability as well as significant reduction of Mean Time to Repair (MTTR) which can be accomplished by swapping out a faulty module. The chassis with light weight, removable modules allows for easy one person installation.

Advanced digital controls included in the ASD FLX have the ability to allow you to program slew rates, such as current and voltage without external hardware, as well as program transient response times on the load to emulate specific recovery times. The ASD FLX optional advanced features also allow you to program different "fault levels," enabling detection of output cabling, connections or load problems before they cause critical system problems. The factory flight data recorder feature has the ability to record parameters such as voltage, current, power, load impedance, faults and input voltages, assisting the factory service centers with diagnosis and repair.

The advanced digital monitoring and control features and flexible voltage assignment modules makes the Sorensen ASD FLX the supply of choice for stringent and high value processes and applications.

* Other voltages available upon request

Advanced features include:

• Precise programming of voltage and current slew rate for sensitive loads.

• Industrial field bus interface (Modbus-TCP, Modbus-RTU, Ethernet) enable real-time digital control.

- Built-in energy meter calculates the delivered energy throughout a process or period of time.
- Optional real time clock enables accurate time-stamping of data logged events.

• Built in power quality monitoring detects and saves input voltage anomalies which can be saved for later diagnostic analysis.

• Programmable analog interface scaling facilitates integrating the ASD FLX with existing systems easily.

• Front panel status LEDs.

• Configure modules for desired voltage (40V, 60V, etc. as available) through convenient rear panel dip switches.

- · Field upgradeable firmware.
- Master-slave parallel operation capability.

ASD FLX Series : Product Specifications

Input	Type: 3-phase, 3-wire	plus ground, r	neutral i	not required. Not phas	se rotat	ion sensitive		
Voltage Ranges	342VAC to 528VAC (model F) Nominal rating is 380/400/480VAC							
Frequency	Rated 47 through 63 Hz							
Efficiency	>89% nominal line, full load.							
Input Current, per phase, typical	400/380Vac 480Vac							
	10kW unit (1 module)		21Arms			17Arms		
	20kW unit (2 modules)		42Arms		33Arms			
	30kW unit (3 modules)		63Arms		50Arms			
Current Inrush	200A Typical							
Power Factor	>0.9 @ Full Load and at nominal line							
Brownout Provisions	Designed to meet SEMI F47-0706, S3, S8, S14 at nominal input voltages							
Output								
Voltage Output	10kW	20kW		30kW	Nois	se (pk-pk)***	Noise (RMS)***	
40Vdc	250A	500A		750A		250mV	60mV	
60Vdc	167A	334A		501A		250mV	60mV	
(*) Measured at the load terminals, with 1 (**) RMS noise is measured directly across (***) Value is for 30kW, single voltage mod	1 1uF in parallel and 6ft of low-inductance load cable with supply operating at full load and nominal input line voltage. oss the output terminal with supply operating at full load and nominal input line voltage. nodels. Other variations may increase value by 2x.							
Sense	To compensate load cables voltage drop, units can generate 2% additional voltage at full scale of output voltage.							
Output								
Load Regulation (Specified at No load to Fi	ull load change, nominal AC	input)						
Voltage	0.1% of maximum output voltage/ current							
Current	0.1% of maximum output voltage/ current							
Line Regulation (Specified at $\pm 10\%$ of non	ninal AC input, constant load)							
Voltage	0.05% of maximum output voltage/ current							
Current	0.05% of maximum output voltage/ current							
Transient Response	A 50% step load will recover to within 0.75% of original value within 1mSec							
Stability	±0.05% of set point after 8 hrs. at fixed line, load and temperature. After 30min warm-up.							
Analog Remote Programming for chassis le	evel, three (3) modules installed							
Voltage Accuracy	1% of full scale							
Current Accuracy	1.5% of full scale							
Power Accuracy	2% of full scale							
Voltage Monitoring	1% of full scale							
Current Monitoring	1.5% of full scale							
Power Monitoring	2% of full scale							
Programming range	0-10Vdc, 4-20mA							
Output							6v	
Output Float	Units maybe put in series	with the float limit	t of outpu	t terminals must be within	±500V o	f chassis potential		
Parallel	Multiple units can be paralleled to form higher power systems. Chassis control loops are tied together so that resulting higher power systems have the same transient response as a 30kW system. Control commands are only required to be sent to "master" supply. Parallel supplies require a shielded CAT 5 cable (STP) and appropriate output wiring connections by the user.							
Calibration	End user calibration is supported. All standard and digital calibration can be performed without removing covers.							
Digital Control (Optional)	Ethernet (Modbus-TCP or Ethernet/IP), RS-485 (MODBUS-RTU)							
Analog Control	All control signals are isolated from the outputs
